

## **IVAPM's 2019 Pain Management Virtual Symposium**

*Discover how leading veterinarians are using pain management strategies in their practices*

### **Veterinary Cannabis: An Emerging Therapy for Pain Management**

*Rob Silver, DVM, MS*

With more and more practices starting to use cannabis treatments, it's at the top of the charts for pain management strategies. This presentation will describe how the molecular constituents of the cannabis plant interact with the system of receptors within the mammalian body known as the endocannabinoid system to modulate pain in the veterinary patient.

Discover how recently published studies from Cornell and Colorado State University provides objective evidence that cannabis can help with the pain of osteoarthritis in the canine patient, and which determined the safety of the non-psychoactive fractions of this controversial plant when given at doses higher than therapeutic doses for a prolonged period of time.

Session discussions includes:

- Current regulatory status of CBD, THC and Cannabis in the US
- Current published veterinary research studies
- Review of plant molecules and their biomedical activity
- The Endocannabinoid System
- Cannabis and pain management
- Types of products and dosage information

Take your practice to the next level. Join us for a discussion of what to look for in a product and practical advice regarding dosing. This session will be sure to be a fascinating one provided by a veterinarian with years of experience using these plant molecules clinically.

*This program is approved by the AAVSB RACE to offer a total of 6.00 CE Credits (6.00 max) being available to any one veterinarian: and/or 7.00 Veterinary Technician CE Credits (7.00 max).*
